Customer Journey Map

This is a working journey for a blogger/content-creator persona. The supplied project materials document API capabilities but do not contain validated customer interviews.

Project Stage	Activities — What does the customer do?	Interactions — What do they interact with?
Stage 1 — Access	Registers and logs in.	POST /api/auth/register and POST /api/auth/login.
Stage 2 — Manage Content	Creates, views, updates or deletes posts.	Blog REST API and protected blog operations.
Stage 3 — AI Assistance	Requests generated content or a summary.	POST /api/ai/generate-blog and POST /api/ai/summarize.

Project Stage	Customer Question	Customer Expectation
Stage 1 — Access	Can I access the system securely?	Expectant; wants a straightforward sign-in experience.
Stage 2 — Manage Content	Can I keep my blog operations in one workflow?	Focused; values content control.
Stage 3 — AI Assistance	Can AI reduce the effort needed to create or condense content?	Interested in efficiency; wants useful output.

Project Stage	System Component	System Considerations
Stage 1 — Access	Authentication flow	Clear validation/error messages, secure secret management and production rate limiting.
Stage 2 — Manage Content	Blog API / database	Indexing, pagination, validation coverage and monitoring as usage grows.
Stage 3 — AI Assistance	AI integration layer	Usage monitoring, limits, caching/background processing and clearer AI error handling.
